These features lead to large changes in lighting applications: LED is now not just meeting the basic need of illumination, but also moving into the improvement of work performance, the provision of optimum atmosphere environment, and the achievement of better health and wellbeing. However, its characteristic of providing intensive illuminance in small fields leads to some large performance discrepancies when compared with conventional light sources such as fluorescent and tungsten. The book covers a comprehensive range of topics on LEDs from the fundamental sciences. Perceived Attributes of Color Perception 27.2.3.2 Chromatic Adaptation 27. How are abstract lighting concepts conveyed, and how far is our perception of light rooted in the biological and cultural history of human evolution? This book endeavours to identify terms and standards which relate to qualities in architectural lighting. It uses this identification to promote communication Nitride Semiconductor Light-Emitting Diodes (LEDs): Materials, Technologies, and Applications The architecture of light: architectural lighting design concepts and techniques.
