This book brings together some of the world's leading water researchers with an especially written collection of chapters on: water economics; transboundary water; water and development; water and energy; and water concepts. Freshwater governance holds a prominent position in the global policy agenda. Burgeoning water demand due to population growth and rising incomes is combining with supply-side pressures, such as environmental pollution and climate change, to create acute conditions of global water scarcity. This is a major concern because water is a primary input for agriculture, manufactu Global Water: Issues and Insights. 234. The numerous examples of different water requirements and dimensions stated. above show how strong external pressures can be applied to water services. Indeed, the operational environment of water services is complex with a number. of stakeholders whose preferences and priorities can create conflicts (see Figure 1). Whatever the priorities, it is obvious that mechanisms are required to co-ordinate. This text taken from Global Water: Issues and Insights by R.
