

Hare Brain, Tortoise Mind: Why Intelligence Increases When You Think Less

By Guy Claxton

HarperCollins Publishers. Paperback. Book Condition: new. BRAND NEW, Hare Brain, Tortoise Mind: Why Intelligence Increases When You Think Less, Guy Claxton, 'Learning to loaf' - this book explores the ways of knowing that require more time, the ways we have unlearned or ignore, but that are crucial to our complete mental development. The human brain-mind will do a number of unusual, interesting and important things if given time. It will learn patterns of a degree of subtlety which normal, purposeful, busy consciousness cannot even see, let alone master. It will make sense out of hazy, ill-defined situations which leave everyday rationality flummoxed. It will get to the bottom of personal, emotional issues much more successfully than the questing intellect. It will detect and respond to meaning, in poetry for example, that cannot be articulated. It will sometimes come up with solutions to complicated predicaments that are wise rather than merely clever. There is good, hard evidence, from cognitive science and elsewhere, for all these capacities. Claxton explores the slower ways of knowing and explains how we could/should use them more often and more effectively.

Hare Brain, Tortoise Mind had a powerful impact on me. The book operates on the reader at two levels, just as Claxton says the mind operates. At the conscious, d-mode level, it presents powerful, experimental evidence for the deep influence in everyday life of the undermind. This is the unconscious mode of knowing through waiting, intuition, and thinking slowly. According to his thorough research, the mind's skill set is a lot more fluid than that. Everything the left brain can do, the right brain can do to, and vice versa. His thing is balance of the thinking modes. He concentrates on the two main ones: 1) intellect (d-mode); and 2) intuition (undermind). He believes that optimal cognition is reached through a balance between the two modes of thinking.
